D-INSIGHTS · WEBMCP

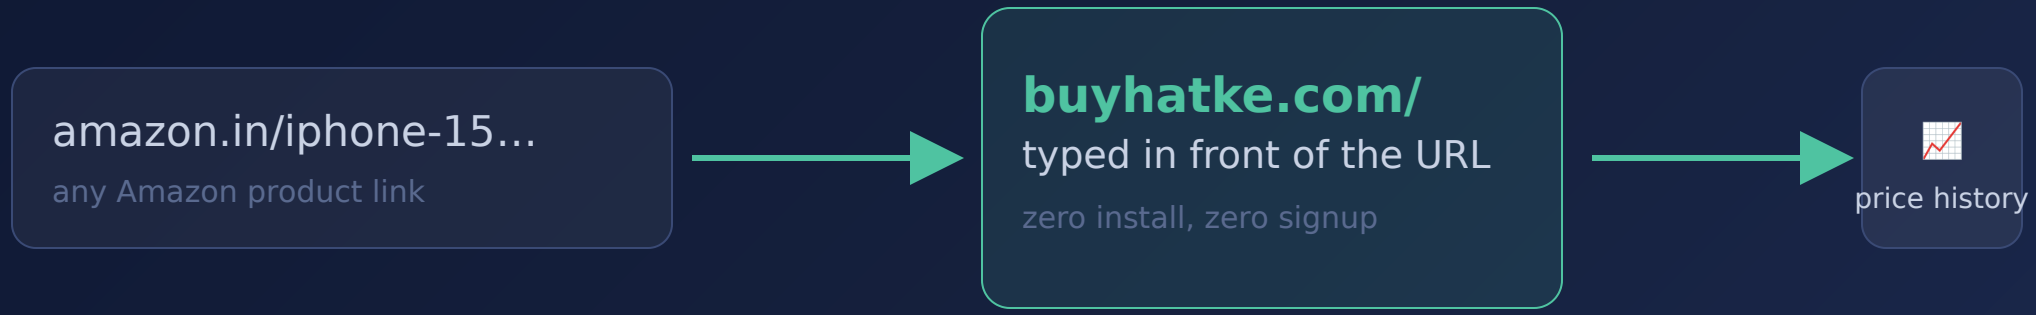

WebMCP Launch Strategy
Lessons from Buyhatke

How a coupon toolbar built on URL tricks teaches us to launch an AI-native web protocol — with a 150-product benchmark as proof.

BUYHATKE LESSON · DISTRIBUTION

Product-as-Distribution

Buyhatke's trick: no install needed. Type **buyhatke.com/** before any Amazon link and you instantly see price history.

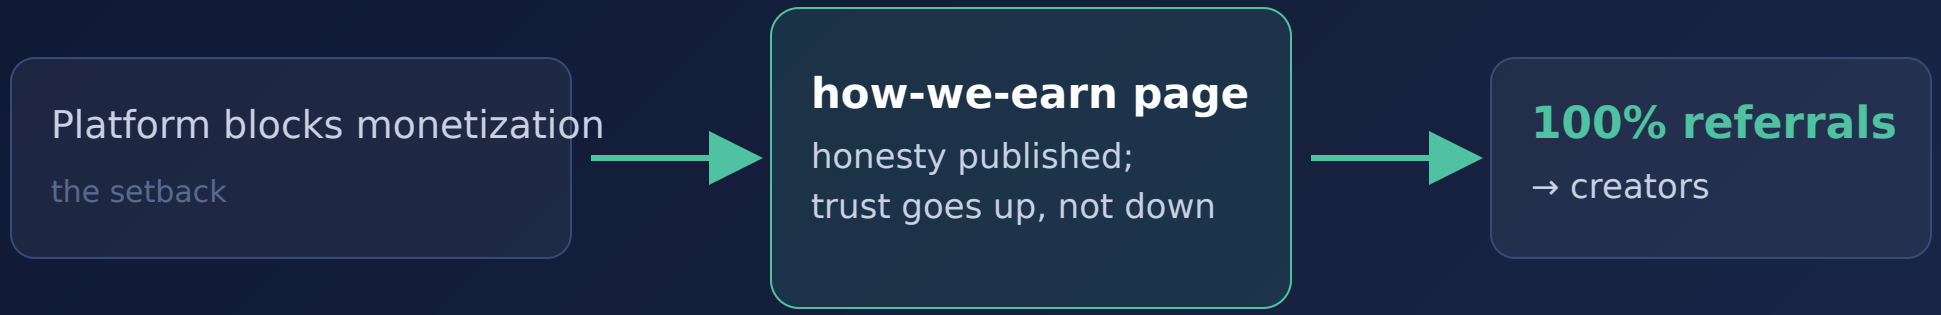

Lesson: the easier the first aha, the more people share it. **WebMCP:** no SDK install — the webmcp.dev/demo link shows instant value.

BUYHATKE LESSON · TRUST

Radical Transparency + Creator Payments

When Amazon blocked their affiliate earnings, Buyhatke chose users over revenue: an open *how-we-earn* page and 100% of referral money to creators.

Lesson: honesty is a marketing weapon; paying creators fully turns them into evangelists. **WebMCP:** publish benchmark methodology openly, pay developers rev-share.

BUYHATKE LESSON · RETENTION

Multi-Vertical Retention

Price-drop alerts, auto-applied coupons, and a Spend Lens dashboard across shopping and flights keep users coming back. The longer they use it, the harder to leave.

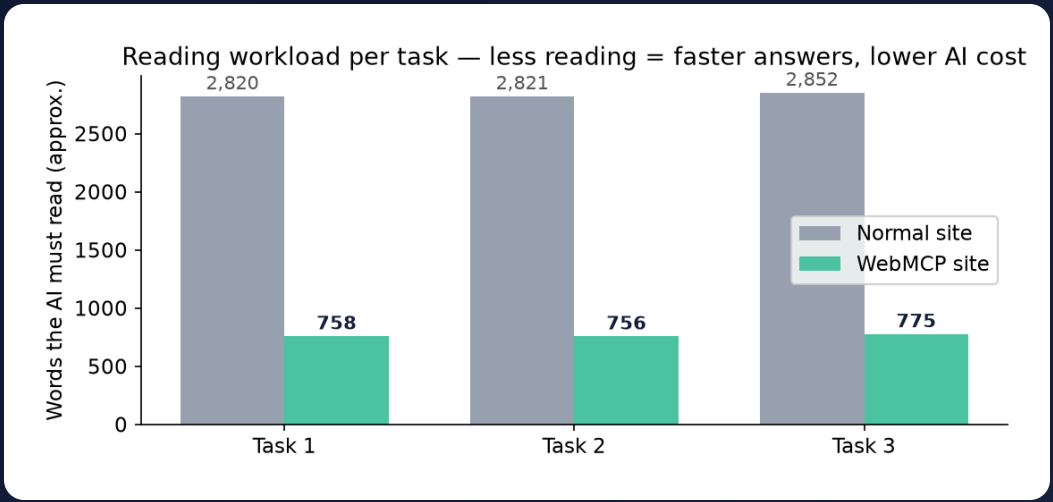

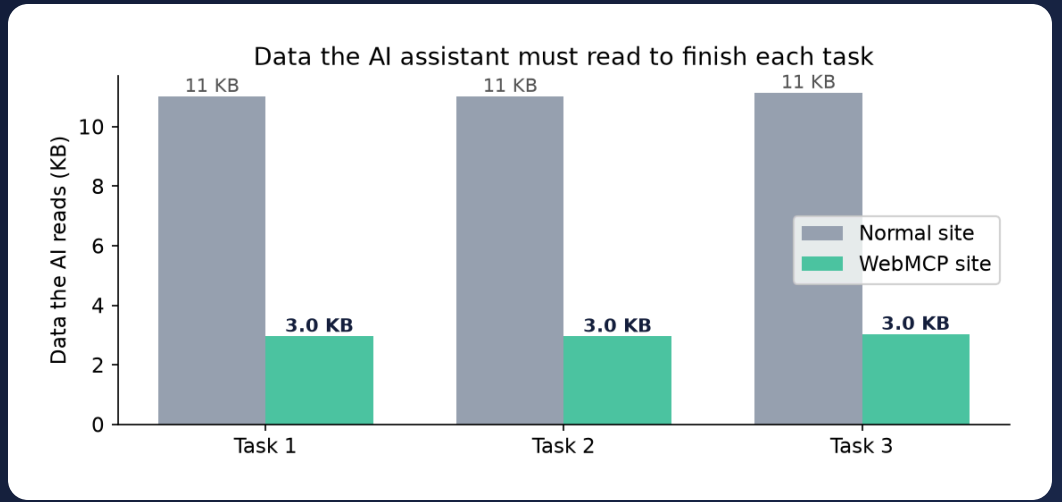

Each vertical adds a reason to return → habit → lock-in

THE PROOF · 150-PRODUCT BENCHMARK

$0-Install Demo

Buyhatke saves shoppers money. WebMCP saves developers tokens: paste a link, see instant proof, zero friction.

−79%
action bytes (237K → 49K)

−42%
input tokens (68.9K → 39.8K)

8/8
tasks correct in both modes

GROWTH ENGINE · COMMUNITY

Developer Ambassadors

Open-source contributors who verify benchmark numbers and promote WebMCP get micro-rewards and rev-share. Their public validation is free credibility.

public validation = free credibility (flywheel back to discovery)

RETENTION PROOF · WEEKLY

Token-Savings Recaps

Weekly proof of value

arrives on its own schedule,
builds the habit of staying

EXECUTION · COMPRESSED

3-Week Launch Plan

WEEK 1

Zero-install demo live
Methodology docs published

WEEK 2

Developer ambassadors onboard
150-product benchmark report

WEEK 3

Cross-vertical expansion
Automated token recaps

One artifact ships per week — each its own announcement

MEASUREMENT · THREE NUMBERS ONLY

The Scoreboard

KPI 1

Demo conversion rate

visitors → paste-a-link trials on webmcp.dev/demo

KPI 2

Active developer ambassadors

verified contributors with a shipped benchmark PR in last 30 days

CLOSING · CALL TO ACTION

Who Does What

Developers

Claim rewards and build. Re-run the benchmark, ship the integration, earn the share.

Browser vendors

Adopt the testing methodology. One shared scoreboard beats ten vendor claims.

Strategists

Watch live benchmarks. The crossover chart is the trendline for AI-native web.

Live proof: demonomcp.converso.work (standard web) vs demowithmcp.converso.work (WebMCP) · Whitepaper + 150-product report bundled.
